

MAYCO lead-backed gypsum wallboard is furnished as 1/2" and 5/8" fire code gypsum board meeting classification ASTM C 1396 with pure lead sheet meeting federal specification QQ-L-201 F, which is factory laminated to the back side of the gypsum panel. The lead extends 1" beyond one vertical edge of the gypsum board to allow for overlapping of joints, thus alleviating the need for separate lead joint strips. Strips are required at the corners.

Shielding accessories for installation include lead discs for screw penetrations and sheet lead for backing and shielding of cutouts for electrical, plumbing, medical gas, or other penetrations as well as corners.
